Pages for outstanding  
contributions within my  
department

## Summary and Highlights

### A full-stack developer with graphic design experience

I have a passion for computers, gadgets and technology in general. When I work on a Web Application or website, I want to make sure it exceeds the customer's expectations and the user can easily access everything they need.

### Highlights

- 10+ years' experience working in tech-related fields.
- Proven track record working with complex technical issues such as email, DNS, web programming and markup languages such as HTML, PHP, Javascript and CSS.

## Employment

### Yellow Pages

#### Domain Name Specialist

Burnaby  
June 2016 to June 2018

- Supported and trained team members to help customers with technical issues, improving customer satisfaction.
- Solved complex email and domain technical issues for hundreds of customers, reducing complaints and cultivating ease of use.
- Successfully transferred customer domain names, ensuring domains were pointing to the right server and customer websites and emails remained live on the internet network.

### Yellow Pages

#### Website Builder / Graphic Designer

Burnaby  
June 2010 to June 2016

- Initiated training teammates on programming outside the template system using HTML, JavaScript, and CSS to improve customer's websites that weren't able to be modified within the system.
- Developed, designed and improved Yellow Pages customer website inside a CMS application.
- Troubleshoot website management system and reported issues to the appropriate team, refining system functionality.

### Self-Employed

#### Web Developer

Burnaby  
2009 to 2010

- Designed and programmed websites and CMS, using HTML, JavaScript, PHP and MySQL databases, tailored to customers' needs which allow them to manage the website on their own.
- Met and planned website design and structure with the customer, ensuring the end product matched their needs.

### Cyber Mesh Systems

#### Web Developer

Burnaby  
2008 to 2009

- Created a CMS to broadcast video programming through a Flash application, using PHP, XML, ActionScript and MYSQL, which facilitates the addition of content to the platform.
- Developed a Flash Video Player that can display ads based on the location of the visitor or the channel the visitor is viewing, generating an additional revenue source for the company.

### Internet Media Corporation

#### Web Developer

Vancouver  
2007 to 2008

- Skillfully built, tested/debugged and maintained web applications with PHP and flash.
- Developed a web application in PHP using MySQL databases which automatically generates Web pages from a template with a flash player.
- Secured the members' area code to avoid intrusion.

## Projects

### MixJS

Feb. 2019

This is a Javascript Mixer that allows you to mix your MP3 music track without any additional hardware.  
Technologies: HTML - CSS - Javascript - ReactJS - React-Redux - Wavesurfer.JS

### Codeover

Feb. 2019

Web app that allows you to create and take quiz. This was created during a 48 hours Hackathon with 4 other teammates. Technologies: HTML - CSS - Ruby - Ruby on Rails - Bootstrap
