Full-stack developer with graphic design and programming experience

When developing a website or an application, I want to make sure its looks are as efficient as the code behind it, and the application is also easy to support and customize. I am a motivated designer and developer with **more than three years of experience creating custom websites and Front-end Web Development through HTML, JavaScript, jQuery, ReactJS, PHP, and CSS.**

Highlights:

- Successfully trained a team of 10 web designers at Yellow Pages to do special customization to website templates using HTML, CSS and JavaScript
- Developed a web application in PHP that automatically generated web pages based on a template
- Constantly met or exceeded the Yellow Pages' targets and productivity levels which was recognized by an award in 2015 for outstanding contribution

SKILLS

Languages and technologies

HTML, CSS, JavaScript, PHP, Ruby, AJAX, JSON, Node.JS

EDUCATION

Full-Stack Web Developer   **November 2018 to February 2019**
CodeCore

DEC Multimedia Integration Diploma   **September 2003 to June 2006**
Cégep de Jonquière

EXPERIENCE

Domain Name Specialist   **June 2016 to June 2018**
Yellow Pages   Burnaby, BC

- Supported and trained team members to help customers with technical issues, improving customer satisfaction
- Solved complex email and domain technical issues for hundreds of customers, reducing complaints and cultivating ease of use
- Successfully transferred customer domain names, ensuring domains were pointing to the right server and customer websites and emails remained live on the internet network

Web Designer   **June 2010 to June 2016**
Yellow Pages   Burnaby, BC

- Initiated training teammates on programming outside the template system using HTML, JavaScript, and CSS to improve customer's websites that weren't able to be modified within the system
- Developed, designed and improved Yellow Pages customer website inside a CMS application
- Troubleshot website management system and reported issues to the appropriate team, refining system functionality

Web Developer   **June 2009 to June 2010**

Self-Employed   Burnaby, BC

- Designed and programmed websites and CMS tailored to customers' needs using HTML, JavaScript, PHP and MySQL databases; ensured websites could be managed and maintained by the customers
- Met and planned website design and structure with the customer in order to match their expectations
- Educated customers by explaining how the website worked and how to make changes
- Planned the budget and marketing of a small business

Web Developer   **July 2008 to March 2009**

Cybermesh Systems   Burnaby, BC

- Created a CMS to broadcast video programming using PHP, XML, ActionScript and MYSQL, which facilitated the addition of content to the platform
- Developed a Flash Video Player that displayed ads based on the location of the visitor or the channel the visitor was viewing, generating an additional revenue source for the company
- Collaborated with sales to determine the customer's goals and targets
- Learned new technologies in order to meet the company's needs

Web Developer   **January 2007 to June 2008**

Internet Media Corporation   Vancouver, BC

- Skillfully built, tested/debugged and maintained web applications with PHP and Flash using a LAMP stack server
- Modified the HTML and CSS elements to integrate a Flash player
- Created a blog using Symfony application
- Secured the members' area code to avoid intrusion
- Worked with a team to improve the quality and usability of our websites
